### Secure Web-Based Check-In

Lambslist is a web-based, check-in system that helps children's pastors and administrators better serve His flock. Serving churches for over 20 years, Microframe knows how difficult it is to reduce classroom check-in times and collect meaningful follow-up data. For these reasons, Microframe developed lambslist as the affordable web-based check-in solution. With a user-friendly design, lambslist offers a simple user interface with familiar web-based controls.

### Features

Web-Based · Online Reporting · 24-Hour Access · 256-Bit SSL Encryption · Dymo Label Printer

### Benefits

**Speed Up Registration:** Quickly register children for class and print pick-up cards and name badges.

**Kiosk Capability:** The ability to utilize self-operated kiosks reduces staffing numbers per service, and expedites the check-in process.

**Family Based:** Parents or volunteers need only find one account in order to check all their children into class.

**Increase Security:** Every child will have a random security code assigned to them at check in and parents will have this matching number on their pick-up card to check-out.

**Promotion:** Advance your grade-based children with the touch of a button.

**Smart Setting:** Based upon service and room settings, Lambslist determines the appropriate room for the child to be checked into, reducing the potential for inaccuracies.

**Reporting and Data Retrieval:** Lambslist has several key reports built-in to help you manage both your flock and your facilities.

- Improves Staff and Volunteer Efficiency
- Saves Valuable Time and Work Hours
- Provides Accurate Follow-up Stats
- Works with Mac/PC

### Built-In Reports
